4. Fire Fighting Measures:

Flammable Properties:

Flash point: Not applicable

Combustible: Material may burn on contact with oxidizers or ignition sources

Flammable Limits:

Lower flammable limits: Not applicable

Upper flammable limits: Not applicable

Auto ignition temperature: Typically, 400°F - 500°F

Explosion Hazard:

Airborne concentrations of combustible dust, when combined with an ignition source, can cause an explosion hazard if the dust concentration exceeds 30-60 g/m³

Hazardous Combustion Products: Carbon dioxide, carbon monoxide, nitrogen oxides, aldehydes, cyanides and other hazardous gases, vapours and particles

Extinguishing Media:

Water, dry chemical and other agents rated for a wood fire (type A fire). Use an extinguisher rated for a Type A fire.

Fire Fighting Instructions:

Evacuate the area and notify the fire department. If possible, isolate the fire by moving other combustible materials. If the fire is small, use a hose-line or extinguisher rated for a Type A fire. If possible, dike and collect water used to fight fires. Fire fighters should wear normal protective equipment (full bunker gear) and positive pressure self-contained breathing apparatus.

5. Accidental Release Measures:

Not Applicable

6. Handling and Storage:

Handling:

Provide ventilation or other measures so that dust levels are below the exposure limits listed in Section 2.

Storage:

Keep dust away from ignition sources and store in a closed container. Consult NFPA 68 & 70 for additional information

7. Exposure Controls/Personal Protection:

Engineering Controls:

Keep the airborne dust concentrations below the exposure limits. Maintain adequate ventilation in the work area.

Respiratory Protection:

When respiratory protection is required, or dust concentrations are unknown, use a NIOSH/M SHA approved air-purifying respirator.

Skin Protection:

Wear work gloves to prevent skin irritation

Eye Protection:

Wear ANSI approved eye protection
